

Springer announces a New Book Series:

Water Governance: Concepts, Methods, and Practice

Series Editors:

Claudia Pahl-Wostl, *University of Osnabrück, Germany*

Joyeeta Gupta, *University of Amsterdam, The Netherlands*

About the Series:

The sustainable management of fresh water resources and the ecosystem services that they provide is one of the key challenges of the 21st century. Many water-related problems can be attributed to governance failure at multiple levels of governance rather than to the resource base itself. At the same time our knowledge on water governance systems and conditions for success of water governance reform is still quite limited. The notion of water governance aims at capturing the complexity of processes that determine the delivery of water related services for societal needs and that provide the context within which water management operates.

This book series aims at providing a platform for developing an integrated perspective on major advances in the field of water governance. Contributions will build bridges across established fields of expertise, across disciplinary perspectives, across levels from global to local and across geographical regions. Topics to be covered include conceptual and methodological advances capturing the complexity of water governance systems, institutional settings, actor constellations, diagnostic approaches, and comparative studies of governance systems. The book series encompasses monographs, textbooks and edited, coordinated volumes addressing one theme from different perspectives. The book series will address mainly a wider scientific audience, but will also provide valuable knowledge to interested practitioners.

What is different about this Book Series?

To the best of our knowledge, there is **no comparable series** focusing on water governance that aims to simultaneously capture learning on concepts, methods and practice for the purpose of developing an integrated perspective on water governance.

The series will aim to provide researchers with in-depth analysis across all topics within governance. In addition, when practitioners reach for two or three books that address the **latest water governance issues**, we expect they will readily select books from our Series.

Submit your Proposal!

Authors interested in submitting a book proposal for this series should contact the Series Editors or the Publishing Editors for a Book Proposal Form.
